

I am Rishabh Dutta and I am currently in my 3rd year of Petroleum Engineering. I grew up in New Delhi, India where I finished high school. In my spare time, I love exploring the outdoors, swimming, working, and hitting the slopes in the winter. The Faculty of Engineering is very diverse with students from around the world. In my years on campus I have noticed that majority of the student's opinions aren't being represented. The primary basis for this lack of representation is the absence of connectivity between the representative and the students. But this is where my strength lies as I have a broad social circle and interact with students throughout the faculty. This will be a great asset for me, as I will be more prepared to communicate the concerns of my fellow classmates to the board. Furthermore, I have a strong desire to help make the experience of my fellow engineering students better. For the engineering department, this means more advertisement, funding, and communication for engineering events. URSU is a great vehicle to help me achieve these goals. With my dedication, passion, and energy I will strengthen the relationship between URSU and Faculty of Engineering.
