

Hi everyone! My name is Akshyata. I am currently a Computer Science graduate student at the University of Regina. I would enjoy the opportunity to serve as Director of Faculty of Graduate and Research if elected. I am also running for the position of University Council. For the past one and a half year, I have served through the university's Ambassador Program. I did my Bachelors of Technology in computer science from the University of Delhi, New Delhi where I was constantly involved in coordinating and organizing various events on campus. I believe my previous experience through the volunteering would be of great help. My contribution to society by being associated with the NGO "Umeed - A drop of hope" for the four years has augmented my leadership and social skills. Being a graduate student I have always wanted to be more involved with the FGSR and this would be a great opportunity to make sure the university resources are utilized significantly. I believe the greatest source of any university is its students and I will strive to make improvements in the school for every graduate student. Thank you for your support.
