

I am currently pursuing MASC in Industrial Systems Engineering. I did my Bachelors in Mechanical Engineering. Starting from my high school also in my university I have always had a keen interest to engage in student politics. I like to actively participate in various campus activities. In the past in high school and in university I served as Coordinator for National service scheme (NSS). Also acted as discipline coordinator and as a class people leader for two years. And I volunteered for various organisations. I am also volunteering as an ambassador since I started my journey here in University of Regina. And currently I am acting as Vice president for UofRobotics Club.

Over the years, I worked in various societies for the betterment of the student experience on campus. If I am elected for this position I focus URSU to reach the graduate students even better with various activities both academic and recreational.
