Candidate Profile:

Currently, I am pursuing a Ph.D. in Electronic Systems Engineering. I did my Master of Applied Science from the University of Regina under the same department. My research area includes wireless security, IoT devices, Cloud computing, and Edge-IoT computing. To say about my past education, I did my Bachelor's degree in Electronics and Communication Engineering from India. Also, I am currently with IEEE as Student Activities Chair for the South region of Saskatchewan. We promote IEEE among students and provide additional workshops and seminars with industries for better exposure to our university's students. For the past two years, I have been working with the Royal Astronomy Society of Canada (RASC) to create awareness among Astronomy and Space Science communities. We hosted Star Party at different places for local people to admire the beauty of the night sky. We also arranged many seminars and workshops (both in-person and remote) to find an object in the night sky using binoculars and telescopes. I hope my experience of interacting with the community and students helps me serve better as FGSR director and make us grow as one unit.
