

Simarpreet Purba

Running for **Director of Science**

Hello everyone, I'm Simarpreet Purba, a sophomore in Computer Science at UofR, excited to bring my passion for the broader and detailed impacts of technology to URSU by running for the role of Director of Science.

I envision a community where the intimidation often associated with STEM is replaced with open doors and welcoming hands, inviting everyone to explore the wonders of science and technology. My goal is to ignite a genuine curiosity about the sciences in students across all disciplines, through engaging events and collaborative programs that highlight the joy and excitement of discovery. By ensuring every student has access to cutting-edge tools, I aim to empower us to push beyond the boundaries of current knowledge and creativity. I'm committed to making STEM accessible and appealing to underrepresented communities, fostering a diverse and vibrant environment where every voice is heard and valued. Through workshops and seminars with industry pioneers and esteemed alumni, I plan to unveil the vast possibilities within technology and beyond. At the core of my manifesto is the belief that technology should serve as a catalyst for positive change, advancing not only our personal ambitions but also the sustainability of our planet. Together, we can create a space where fear is replaced with curiosity, and challenges are seen as opportunities for growth and innovation.

Together, let's transform URSU into a hub of innovation and inclusivity. I'd be honored to have your vote for Director of Science. Let's make a difference, together.

Regards,
Simarpreet Purba
